### **Business Strategy and Outlook** 11 Jun 2021

For more than 50 years, Essential Utilities--formerly Aqua America--was one of the few pure-play water utilities in the United States. But its \$4.3 billion acquisition of Peoples Gas in March 2020 made the company nearly 50% larger and diversified its earnings mix.

The acquisition hasn't changed Essential's core investment proposition. Essential's gas and water utility earnings remain mostly rate regulated, and we expect management to run it like most other regulated U.S. utilities, prioritizing infrastructure investment growth and a robust dividend. Our outlook for 8% earnings growth during the next five years is a little higher than our growth outlook for most other U.S. utilities.

Although core retail water use has been falling steadily as a result of efficiency savings for several decades, Essential has been able to grow earnings and the dividend for many years. Like many utilities, Essential is replacing and upgrading infrastructure that is decades old across its system, resulting in organic rate base growth. We also expect Essential to grow by acquiring small, typically municipal-owned water systems. In the U.S., 85% of the population is served by a municipal water utility, offering a long runway of acquisition growth opportunities.

Similarly, we expect little natural gas usage growth at Peoples Gas, which had been owned by a private equity group. But the gas business still should produce steady earnings growth as Essential replaces and upgrades the system infrastructure.

Fair market value laws in several states support Essential's water business acquisition strategy. These laws require Essential to pay municipalities at least the assessed value of the system it acquires and allow Essential to add these assets to rate base at the assessed value rather than historical cost. The municipalities benefit by ensuring they get fair prices, and Essential shareholders benefit by ensuring the company doesn't overpay for growth. In many cases, these deals are immediately value-accretive. Recent FMV legislation in Kentucky and West Virginia opens acquisition opportunities near areas Essential already serves.

#### **Profile**

Essential Utilities is a Pennsylvania-based holding company for U.S. water, wastewater, and natural gas distribution utilities. The company's water business serves 3 million people in eight states. Nearly three fourths of its water earnings come from Pennsylvania, primarily suburban Philadelphia. It also has a small market-based water business that provides water and water services to third parties, notably natural gas producers. Its \$4.3 billion Peoples Gas acquisition that closed in March 2020 adds 750,000 gas distribution customers in Pennsylvania, West Virginia, and Kentucky.

### Morningstar Analysis

## Initiating Coverage of Essential Utilities With Narrow Moat, \$39 Fair Value 11 Jun 2021

We are initiating coverage of Essential Utilities with a \$39 per share fair value estimate, narrow moat rating, and stable moat trend.

We consider the stock 23% overvalued based on the \$48 stock price as of June 11. The stock trades at 28 times our 2021 earnings estimate, a 30% premium to the current median U.S. utilities P/E. Although we think Essential deserves a premium valuation relative to electric and gas utilities because of its higher returns on capital and growth potential in the water business, we think investors should wait for a pullback. Its closest peer, American Water Works, trades at a 30% premium to our fair value estimate and 38 P/E.

Essential, formerly Aqua America, was one of the few pureplay U.S. water distribution and wastewater utilities before acquiring Pennsylvania-based Peoples Gas in 2020. The company now gets two thirds of its earnings from its water business and one third of earnings from gas distribution.

The \$4.3 billion Peoples Gas acquisition doesn't change Essential's core regulated utility business model, but we think it was a setback for investors. Essential paid more than double book value for the business, which has good near-term growth potential but long-term uncertainty as the U.S. moves away from fossil fuels. We think that capital would have been better spent growing its water businesses.

Our five-year, 8% annual earnings growth outlook tops most other U.S. utilities' outlooks. We think the water business has long, attractive runway of growth mostly through acquisitions of municipal utilities. Fair market value laws in some states allow Essential to mark up book value on its water acquisitions, eliminating the risk of overpaying.

We expect Essential to continue its impressive dividend

growth track record. The company has paid a dividend every year since 1945 and has raised the dividend by 5% or more every year for the last 25 years. We consider management's 65% payout target more attractive than its peers.

#### Fair Value & Profit Drivers 11 Jun 2021

We are initiating coverage of Essential Utilities with a \$39 per share fair value estimate.

We expect earnings to grow 8% annually during the next four years, which is above management's 5%-7% annual earnings growth target. Our growth rate is based on \$1 billion of annual capital investment and \$150 million of water utility acquisitions per year, on average. Our growth rate is higher than management's target range primarily due to our assumption that Essential will find more acquisition opportunities than it has in the past. We think the spread of fair market value legislation and increasing need for system investments will lead more municipal utilities to consider selling their systems.

Apart from acquisitions, the combination of surcharges and base rate increases support our earnings growth outlook. This includes favorable outcomes for likely base rate reviews in Pennsylvania, its largest service territory, in 2022-23.

In our discounted cash flow valuation, we use a 6.0% cost of capital based on a 7.5% cost of equity. This is lower than the 9% rate of return we expect investors will demand of a diversified equity portfolio, reflecting Essential's lesser sensitivity to the economic cycle and lower degree of operating leverage. We incorporate \$5 per share of incremental value to better recognize the benefits accruing to shareholders from Essential having issued debt at coupon rates far below our long-term cost of debt assumption.

Moat Trend™ ESG Risk Rating Assessment<sup>1</sup> **Last Price** Fair Value **Capital Allocation** Uncertainty Economic Moat™ **Industry Group** 48.86 USD 39.00 USD Stable Standard Utilities - Regulated Low Narrow 

#### Scenario Analysis

In our bear case, a 20% annual reduction in our 2021-24 capital expenditure forecast would lower our fair value estimate by \$2 per share. A 50-basis-point cut in our long-term allowed regulatory return on equity assumption would reduce our fair value an additional \$3 per share.

In our bull case, a 20% increase in our capital spending assumption would raise our fair value estimate by \$2 per share, assuming full regulatory support at current allowed returns. A 50 basis-point increase in our long-term allowed regulatory return on equity assumption would add another \$3 per share.

A 50-basis-point change in our cost of equity assumption would lead to a \$2 per share change in our fair value estimate.

#### **Economic Moat**

We have greater than 50% confidence that Essential can generate economic profits on a consolidated basis for at least the next 10 years based on its efficient scale competitive advantage for its water, wastewater, and

natural gas distribution businesses. Essential Utilities' consolidated returns are the foundation for our narrow moat rating.

We have strong confidence that Essential's returns on invested capital will remain at a healthy spread over its weighted average cost of capital for the foreseeable future, leading us to assign the company a narrow moat rating. Essential owns a difficult-to-replicate network of water, wastewater, and natural gas distribution infrastructure that provides essential energy sources to customers. In exchange for a service territory monopoly, state and federal regulators set rates for Essential's water distribution, wastewater, and natural gas distribution utilities at levels that aim to keep customer costs low while providing adequate returns for capital providers. This implicit contract between regulators and the utilities should, in the long run, allow Essential to earn a consistent spread over its cost of capital. Rate-setting mechanisms in the states that Essential serves are mostly constructive, leading to ROICs modestly above its WACC.

In the water distribution and wastewater businesses, Essential enjoys fair market value legislation in seven of the eight states where it has operations. This allows Essential to ensure its growth acquisitions are value-accretive by allowing it to adjust its regulated earning asset base to reflect the deal value based on a third-party valuation. This effectively eliminates the drag on returns created by goodwill and the risk of cost overruns for organic growth investment. Essential made 57 water system acquisitions between 2015 and 2019, and goodwill represented only 1% of Essential's net asset base. Thus, Essential's earned ROICs tend to track very closely its regulatory allowed ROICs, the foundation of an economic moat for regulated utilities.

As with all regulated utilities, we think regulatory caps on revenue and returns preclude Essential from establishing a wide economic moat.

**Last Price** Economic Moat™ Moat Trend™ Fair Value **Capital Allocation** ESG Risk Rating Assessment<sup>1</sup> Uncertainty **Industry Group** 48.86 USD 39.00 USD Stable Standard Utilities - Regulated Low Narrow 

Essential derives about 1% of earnings from businesses that have few competitive advantages, particularly its water and wastewater services. Essential exited some of these businesses in 2017, and we expect these businesses' share of earnings will continue to shrink as management focuses on growth at the regulated distribution utilities.

#### **Moat Trend**

We think Essential's moat trend is stable. We do not expect the regulatory rate structures that support earnings and ROICs for Essential's water or gas utilities to change substantially, given state laws that demonstrate the political and regulatory support for maintaining Essential's financial health, stability, and investments. We believe regulators will rely on state legislation and constructive rate plans to uphold the implicit contract with capital providers that allows Essential to earn above its cost of capital on balance, in the long run. Fair market value legislation ensures Essential's growth-by-acquisition strategy is value-accretive for shareholders.

**Last Price** Moat Trend™ Fair Value **Capital Allocation** ESG Risk Rating Assessment<sup>1</sup> Uncertainty Economic Moat™ **Industry Group** 48.86 USD 39.00 USD Stable Standard Utilities - Regulated Low Narrow 

### Bulls Say/Bears Say

#### **Bulls Say**

- Constructive regulation allows Essential to raise rates through surcharges or rate cases to reduce regulatory lag and enhance cash flow available to pay the dividend and invest in growth projects.
- ► Fair market valuation state laws allow Essential to make municipal water utility acquisitions immediately value-accretive for shareholders.
- Essential has raised its dividend 30 times in the last 29 years, including 29 consecutive increases of more than 5%

#### **Bears Say**

- Essential Utilities paid a peak market price for Peoples Gas, which will probably drag on consolidated returns for many years.
- Essential's capital investment plan likely means annual rate increases for most of its customers, which could cause regulatory pushback that would slow earnings growth.
- Rising interest rates could raise financing costs for Essential to fund its investments and make its dividend yield less attractive for income investors.

#### **Financial Strength**

Essential maintains a capital structure in line with its regulatory allowed capital structure for ratemaking purposes and leverage metrics in line with high investment-grade credit ratings. We don't expect that to change.We expect Essential to issue new debt to fund growth investments and acquisitions in the coming years. We don't expect any material new equity needs once it completes its \$300 million equity forward sale in August. With constructive regulation, we expect Essential will be able to use its cash flow to fund most of its equity investment needs during the next five years. Essential has paid an annual dividend since 1945 and increased it at least 5% for each of the last 25 years. We think Essential will be able to continue growing the dividend at this rate or higher while staying below management's 65% maximum payout ratio threshold, which is in line with Essential's peer utilities.

#### **Risk & Uncertainty**

The biggest uncertainty for Essential is rate regulation in the states it serves. Although Essential has a long history of constructive rate regulation, customers and regulators remain sensitive to rate increases that drive Essential's earnings growth. Deterioration of regulatory relations and policies could jeopardize Essential's growth potential. Customer growth and value-accretive water acquisitions have kept earnings growing even while water use has fallen steadily for several decades. Unlike many utilities that have lobbied to decouple rates from usage trends, Essential has maintained usage-based rates to avoid potential pushback from regulators. Customer growth, tax benefits, and constructive rate regulation have more than offset unfavorable usage trends. Essential's ability to make annual rate adjustments in states it serves offsets some of the regulatory ratemaking uncertainty. These surcharges effectively eliminate regulatory lag and improve cash flow to support capital investment and dividends. Essential's large capital investment plan will require good execution to

**Last Price** Economic Moat™ Fair Value Moat Trend™ **Capital Allocation** ESG Risk Rating Assessment<sup>1</sup> Uncertainty **Industry Group** 48.86 USD 39.00 USD Stable Standard Utilities - Regulated Low Narrow 

> keep projects on time and on budget. Delays or cost overruns could reduce shareholder returns. Essential also faces environmental, social, and governance risk, given its water and natural gas distribution businesses. At the water business, Essential must meet strict quality measures. It faces the risk of supplying contaminated drinking water for its customers if it has an operational failure, although we think this risk is low. Essential has invested in monitoring technology that allows it to supply water that is far cleaner than government requirements and reduces per- and polyfluoroalkyl substances, or PFAS.At the natural gas business, there is a long-term risk that policymakers will move retail customers away from gas heating, but we think that's unlikely in the near future, given the technical and economic hurdles in the colder climate where Essential operates.

#### Capital Allocation 11 Jun 2021

We give Essential Utilities a Standard capital allocation rating, balancing the company's long history of shareholder-friendly capital allocation in the water business with what we think was an ill-advised move into the gas business.

Essential has an impressive record of paying a dividend every year since 1945 and raising it 30 times in the last 29 years. While returning this cash to shareholders, Essential still found ways to invest in organic growth and acquisitions.

We think Essential overpaid for Peoples Gas. The equity dilution from the \$4.3 billion cash price will be difficult to overcome even if everything goes perfectly. The \$2.3 billion of goodwill on its balance sheet following the acquisition will remain a drag on returns. Goodwill was nearly equal to the book value of the assets.

Essential also gave up its premium market valuation with the Peoples acquisition. As one of the few pure-play water utilities, Essential was a staple in portfolios focused on environmental, social, and governance issues, especially water. Adding fossil-fuel exposure with the gas business could turn off some ESG investors. We think this would be an overreaction based on natural gas' low-carbon profile, but that's not likely to persuade strict environmentally focused investors to continue holding Essential.

CEO and chairman Chris Franklin has been in his role since 2015 and with the company for 28 years. CFO Dan Schuller joined the company in 2015.

### **Analyst Notes**

## Initiating Coverage of Essential Utilities With Narrow Moat, \$39 Fair Value 11 Jun 2021

We are initiating coverage of Essential Utilities with a \$39 per share fair value estimate, narrow moat rating, and stable moat trend.

We consider the stock 23% overvalued based on the \$48 stock price as of June 11. The stock trades at 28 times our 2021 earnings estimate, a 30% premium to the current median U.S. utilities P/E. Although we think Essential deserves a premium valuation relative to electric and gas utilities because of its higher returns on capital and growth potential in the water business, we think investors should wait for a pullback. Its closest peer, American Water Works, trades at a 30% premium to our fair value estimate and 38 P/E.

Essential, formerly Aqua America, was one of the few pureplay U.S. water distribution and wastewater utilities before acquiring Pennsylvania-based Peoples Gas in 2020. The company now gets two thirds of its earnings from its water business and one third of earnings from gas distribution.

The \$4.3 billion Peoples Gas acquisition doesn't change Essential's core regulated utility business model, but we think it was a setback for investors. Essential paid more than double book value for the business, which has good near-term growth potential but long-term uncertainty as the U.S. moves away from fossil fuels. We think that capital would have been better spent growing its water businesses.

Our five-year, 8% annual earnings growth outlook tops most other U.S. utilities' outlooks. We think the water business has long, attractive runway of growth mostly through acquisitions of municipal utilities. Fair market value laws in some states allow Essential to mark up book value on its water acquisitions, eliminating the risk of overpaying.

We expect Essential to continue its impressive dividend growth track record. The company has paid a dividend every year since 1945 and has raised the dividend by 5% or more every year for the last 25 years. We consider management's 65% payout target more attractive than its peers.

### **Research Methodology for Valuing Companies**

#### **Qualitative Equity Research Overview**

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. We believe this bottom-up, long-term, fundamentally based approach allows our analysts to focus on long-term business drivers, which have the greatest valuation impact, rather than short-term market noise.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at an uncertainty-adjusted discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

#### 1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over

to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital, or RONIC, and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital

#### **Morningstar Research Methodology for Valuing Companies**

the next several years; or negative when we see signs of deterioration.

#### 2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

#### Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes, or EBI, and the net new investment, or NNI, to derive our annual free cash flow forecast

#### Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital — the return on capital of the next dollar invested ("RONIC") —

decline until the perpetuity stage is reached. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

#### Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term market-value weights.

#### 3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to

### **Research Methodology for Valuing Companies**

assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, exposure to material ESG risks, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate. In cases where there is less than a 25% probability of an event, but where the event could result in a material decline in value, analysts may adjust the uncertainty rating to reflect the increased risk. Analysts may also make a fair value adjustment to reflect the impact of this event.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

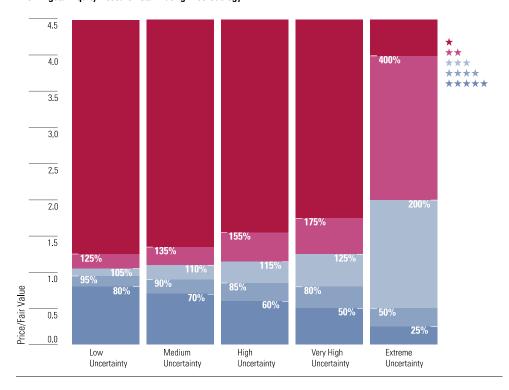

- ► Low—margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ► Medium—margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ► High—margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ➤ Very High—margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ► Extreme—margin of safety for 5-star rating is a 75% discount and for 1-star rating is 300% premium.

#### 4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed, which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com.

#### Morningstar Equity Research Star Rating Methodology

#### **Morningstar Star Rating for Stocks**

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

- ★★★★★ We believe appreciation beyond a fair riskadjusted return is highly likely over a multiyear time frame. The current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.
- $\star\star\star\star$  We believe appreciation beyond a fair risk-adjusted return is likely.
- ★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).
- $\bigstar\bigstar$  We believe investors are likely to receive a less than fair risk-adjusted return.
- ★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. The market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

### **Research Methodology for Valuing Companies**

#### Other Definitions

**Last Price:** Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environmental, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4,

Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/.

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

**Quantitative Valuation:** Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ► Undervalued: Last Price is below Morningstar's guantitative fair value estimate.
- ► Fairly Valued: Last Price is in line with Morningstar's quantitative fair value estimate.
- Overvalued: Last Price is above Morningstar's quantitative fair value estimate.

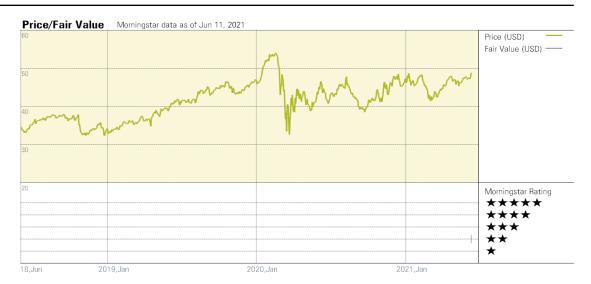

#### **Risk Warning**

Morningstar Research Services LLC, registered with and governed by the U.S. Securities and Exchange Commission. To order reprints, call +1 312-696-6100. To license the research, call +1 312-696-6100.

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.
